WELL REGISTRATION

Purpose

Well Registration aims to register wells in Mid-Kaweah GSA for the purposes of greater understanding of groundwater conditions and groundwater management strategies. Well Registration involves landowners providing information on their wells such as location, use and status. Agricultural, domestic, industrial, and retired (not-yet-destroyed) wells are being sought as a part of the Well Registration process.

It is important for the agencies tasked with groundwater management to work with the most accurate and current data. The Well Registration effort is driven by the need to improve the MKGSAs understanding of localized pumping risks and impacts. The robust data collected by the Well Registration effort allows the MKGSA and their technical teams to be better equipped to understand threats to groundwater sustainability and to better plan for the financial needs to achieve sustainability.
